

SERVICE BULLETIN NO. 201

OPERATING PRESSURE

E-60, E-60H and V-66

January 2004

Under Meyer Products continuing Product Improvement Program, Meyer Engineering has reevaluated the E-60, E-60H and V-66 Quik Lift® Units. Changes will come into effect starting with production in January 2004. The E-60 Quik Lift® will now incorporate a 1-3/4" x 6" Lift Ram Assembly. Pressure Relief setting for the Quik Lift Units will change from 2500 P.S.I to 2000 ± 50 P.S.I.. Lowering the operating pressure in combination with the motor and pump currently in production, will improve the overall operation of these units. Benefits to a lower pressure setting will be less stress on internal O-rings and a reduction of total amp draw when operating the snowplow. Lower amp draw will increase the life of the hydraulic electric motor and vehicle battery while at the same time providing the speed and strength required for proper snowplow operation.

For customers wishing to update their current E-60 Quik Lift® to current production, a kit part number 08839 is available. To order the kit please contact the Sales Department.

Meyer Products assumes no responsibility for installations not made according to these instructions.
